TECHNICAL SKILLS

Languages	Python , Java, SQL, JavaScript, C++, Bash
Frameworks	Django, Spring Boot, Spring REST, FastAPI, React, Bootstrap
LLM / AI	OpenAI API, LangChain, RAG pipelines, ChromaDB (vector search), prompt engineering
Data	MySQL, SQL Server, SQLite, REST API design
Architecture	OOP, design patterns (MVC, Factory), microservices, RESTful APIs.
DevOps	Git, Jenkins, Maven, Docker (fundamentals), CI/CD, Kubernetes (Fundamentals), Microsoft Azure (Basics).
Security	OAuth 2.0, JWT.

PROFESSIONAL EXPERIENCE

Associate Software Engineer · Capgemini Technology Services

May 2024 – Present

Authentication Federation Gateway (AFG) — Ericsson

- ▶ Developed and maintained backend API services in Java (Spring Boot) and C++ for Ericsson's Authentication Federation Gateway.
- ▶ Implemented and optimized OAuth 2.0 and JWT authentication protocols, improving token validation reliability and contributing to security compliance across multi-vendor environments.
- ▶ Built backend data processing modules responsible for ingesting and handling authentication events, with strict attention to data integrity, audit trails, and control mechanisms.
- ▶ Collaborated with cross-functional teams (product, QA, security architects) to translate business requirements into backend deliverables, participating in design discussions, code reviews, and incident response.
- ▶ Developed an Agentic AI-powered dashboard for test strategy management, enabling QA teams to track execution status and improving test visibility.

PROJECTS

Resume Intelligence Chatbot | Python, FastAPI, LangChain, OpenAI API, ChromaDB, React

- ▶ Built a production-ready RAG chatbot using Python, FastAPI, LangChain, OpenAI APIs, and ChromaDB to answer recruiter questions from uploaded resumes.
- ▶ Designed the complete ingestion pipeline, including PDF parsing, chunking, embeddings, vector search, and GPT-4 context retrieval.
- ▶ Developed a React frontend with streaming responses and deployed the application on Render.

VNews — News Aggregation Platform | React, REST APIs, JavaScript, Bootstrap

- ▶ Built a responsive, data-driven news aggregation platform consuming third-party REST APIs, reducing page load time by 50% through client-side caching and lazy loading.
- ▶ Implemented user authentication, content management, and commenting features — full end-to-end ownership of a consumer-facing application.

EDUCATION

B.E. Computer Engineering | TCET — Mumbai University | GPA : 9.63

2019 – 2023

ACHIEVEMENTS & ACTIVITIES

- ▶ Solved **350+ LeetCode problems**, strengthening algorithmic problem-solving and data structure proficiency.
- ▶ Smart India Hackathon Finalist among **10,000+ participants**, led backend architecture and API design.
- ▶ JPMorgan Chase Code for Good Finalist, built backend solution in a **36-hour hackathon under real-world constraints**.
